

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): An absorbent article having a longitudinal dimension and a lateral dimension comprising:

a top sheet;

a back sheet, whereby the top sheet and the back sheet form a first waist region, a second waist region longitudinally opposite the first waist region, and a crotch region there between;

an absorbent laminate core comprising at least four layers whereby two of the layers are outer layers comprising an upper layer and a lower layer, said upper and lower layers independently comprising a tissue or tissue-like material, and one of the inner layers disposed between the upper layer and lower layer is a central fibrous layer containing from about 30 to about 50% by weight super absorbent polymer (SAP) and continuous crimped filament tow fibers, said continuous crimped filament tow fibers extending the length of the absorbent laminate core, whereby the absorbent laminate core comprises at least one additional inner layer disposed between the upper layer and lower layer, the additional inner layer being selected from the group consisting of a fluid acquisition layer, a distribution layer, an additional fibrous layer, a wicking layer, a storage layer, and combinations and fragments thereof.

Claim 2 (original): The absorbent article of claim 1, further comprising at least one fastening element attached to a lateral edge of the first waist region; and

one or more target devices attached to the article in the second waist region, where at least one fastening element and the one or more target devices are capable of attaching to one another, the one or more target devices being located so that the first waist region and second waist region of the garment may be joined to one another to secure the garment on a wearer.

Claim 3 (original): The absorbent article of claim 1, further comprising elastic leg gathers comprising one or more elastic materials disposed adjacent the lateral edge of the crotch region, and standing leg gathers disposed on the top sheet adjacent the lateral edge of the crotch region.

Claim 4 (original): The absorbent article of claim 2, wherein the at least one fastening element comprises a hook portion of a hook and loop fastener and the one or more target devices comprise the loop portion of a hook and loop fastener.

Claim 5 (original): The absorbent article of claim 2, wherein the at least one fastening element is an adhesive tape and the one or more target devices comprise a tape receiving surface.

Claim 6 (original): The absorbent article of claim 2, wherein the at least one fastening element is comprised of a pair of laterally extending tabs disposed on the lateral edges of the first waist region, whereby the laterally extending tabs each include at least one fastening element.

Claim 7 (previously presented): The absorbent article of claim 1, wherein the absorbent laminate comprises just one additional inner layer disposed between the upper layer and the lower layer, and the additional inner layer is a fluid acquisition layer.

Claim 8 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used, and the layer is a distribution layer.

Claim 9 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used, and the layer is an additional fibrous layer containing SAP.

Claim 10 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used, and the layer is a wicking layer.

Claim 11 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used, and the layer is a storage layer.

Claim 12 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used, and the layer is a fragmented layer.

Claim 13 (withdrawn): The absorbent article of claim 1, wherein one additional layer is used,

and the layer is a combination of a wicking layer and a distribution layer.

Claim 14 (withdrawn): The absorbent article of claim 1, wherein two additional layers are used.

Claim 15 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a central fibrous layer disposed between the upper layer and the lower layer; and
- an additional layer disposed between the central fibrous layer and the lower layer, the additional layer being selected from a wicking or storage layer.

Claim 16 (previously presented): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a central fibrous layer disposed between the upper layer and the lower layer; and
- an additional layer disposed between the central fibrous layer and the upper layer, the additional layer being selected from a fluid acquisition layer or a combination of a wicking and distribution layer.

Claim 17 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a first central fibrous layer disposed between the upper layer and the lower layer;
- a second central fibrous layer disposed between the first central fibrous layer and the lower layer; and
- an additional layer disposed between the first and second central fibrous layers, whereby the additional layer is selected from a storage layer or a combination of a wicking and distribution layer.

Claim 18 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a first central fibrous layer disposed between the upper layer and the lower layer;
- a second central fibrous layer disposed between the first central fibrous layer and the lower layer; and
- a tissue layer disposed between the first and second central fibrous layers.

Claim 19 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a central fibrous layer disposed between the upper layer and the lower layer;
- a first additional layer disposed between the central fibrous layer and the upper layer, the first additional layer being selected from a fluid acquisition layer or a combination of a wicking and distribution layer; and
- a second additional layer disposed between the central fibrous layer and the lower layer, the second additional layer being selected from a combination of a wicking and distribution layer or a storage layer.

Claim 20 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a first central fibrous layer disposed between the upper layer and the lower layer;
- a second central fibrous layer disposed between the first central fibrous layer and the lower layer;
- a first additional layer disposed between the first central fibrous layer and the upper layer, the first additional layer being selected from a fluid acquisition layer or a combination of a

wicking and distribution layer; and

a second additional layer disposed between the first and second central fibrous layers, the second additional layer being selected from a combination of a wicking and distribution layer or a storage layer.

Claim 21 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

an upper layer;

a lower layer;

a first central fibrous layer disposed between the upper layer and the lower layer;

a second central fibrous layer disposed between the first central fibrous layer and the lower layer;

a first additional layer disposed between the first and second central fibrous layers, the first additional layer being a combination of a wicking and distribution layer; and

a second additional layer disposed between the second central fibrous layer and the lower layer, the second additional layer being selected from a combination of a wicking and distribution layer or a storage layer.

Claim 22 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

an upper layer;

a lower layer;

a central fibrous layer disposed between the upper layer and the lower layer; and

an additional layer disposed between the central fibrous layer and the lower layer, the additional layer being a fragmented layer selected from a fragmented wicking layer or a fragmented storage layer.

Claim 23 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

an upper layer;

a lower layer;

a central fibrous layer disposed between the upper layer and the lower layer; and  
an additional layer disposed between the central fibrous layer and the upper layer, the additional layer being a fragmented wicking layer.

Claim 24 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a first central fibrous layer disposed between the upper layer and the lower layer;
- a second central fibrous layer disposed between the first central fibrous layer and the lower layer; and
- an additional layer disposed between the first and second central fibrous layers, whereby the additional layer is a fragmented layer selected from a fragmented wicking layer or a fragmented storage layer.

Claim 25 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a first additional layer disposed between the upper and lower layers, the first additional layer being a fluid acquisition layer;
- a second additional layer disposed between the first additional layer and the lower layer, the second additional layer being selected from a combination of a wicking and distribution layer or a storage layer; and
- a central fibrous layer disposed between the second additional layer and the lower layer.

Claim 26 (withdrawn): The absorbent article of claim 1, wherein the absorbent laminate core comprises:

- an upper layer;
- a lower layer;
- a central fibrous layer disposed between the upper layer and the lower layer;

a first additional layer disposed between the central fibrous layer and the lower layer, the first additional layer being a combination of a wicking and distribution layer; and

a second additional layer disposed between the first additional layer and the lower layer, the second additional layer being a storage layer.

Claim 27 (original): The absorbent article of claim 1, wherein the central fibrous layer comprises from about 50% to about 95% by weight super absorbent polymer (SAP), and has a SAP efficiency of at least 80%.

Claim 28 (previously presented): The absorbent article of claim 1, wherein the central fibrous layer comprises fibers selected from the group consisting of cellulose acetate fibers, rayon fibers, lyocell fibers, polyacrylonitrile fibers, cotton fibers and cotton linter fibers.

Claim 29 (original): The absorbent article of claim 1, wherein the central fibrous layer comprises cellulose acetate tow fibers.

Claim 30 (original): The absorbent article of claim 1, wherein the central fibrous layer further comprises up to 10% by weight fluff wood pulp fibers.

Claim 31 (original): The absorbent article of claim 1, wherein the central fibrous layer further comprises particulate additives.

Claim 32 (original): The absorbent article of claim 31, wherein the particulate additives comprise insoluble, hydrophilic polymers having particle diameters of 100  $\mu\text{m}$  or less.

Claim 33 (original): The absorbent article of claim 31, wherein the particulate additives are selected from the group consisting of potato, corn, wheat, and rice starches, and partially cooked or modified starches.

Claim 34 (currently amended): A method of making an absorbent article comprising:

a) preparing a top sheet and a back sheet;

b) preparing an absorbent laminate core by:

b1) preparing an upper layer and a lower layer, said upper and lower layers independently comprising a tissue ~~of~~ or a tissue-like material;

b2) preparing a central fibrous layer containing from about 30 to about 50% by weight of superabsorbent polymer particles (SAP) and continuous crimped filament tow fibers, said continuous crimped filament tow fibers extending the length of the absorbent laminate core, and at least partially disposing the central fibrous layer between the upper layer and lower layer; and

b3) preparing at least one additional layer selected from the group consisting of a fluid acquisition layer, a distribution layer, an additional fibrous layer, a wicking layer, a storage layer, and combinations and fragments thereof, and disposing the at least one additional layer between the upper and lower layers; and

c) disposing the absorbent laminate core between the top sheet and the back sheet, whereby the top sheet, back sheet, and absorbent laminate core are prepared and arranged such that the top sheet and the back sheet form a first waist region, a second waist region longitudinally opposite the first waist region, and a crotch region between the waist regions.

Claim 35 (original): The method of claim 34, further comprising

d) attaching at least one fastening element to lateral edges of the first waist region; and

e) preparing at least one target device and attaching the at least one target device to the article in the second waist region, where the at least one fastening element and the at least one target device are capable of attaching to one another, the at least one target device being located so that the first waist region and second waist region of the article may be joined to one another to secure the article on a wearer.

Claim 36 (original): The method of claim 35, wherein the at least one fastening element comprises a hook portion of a hook and loop fastener and the at least one target device comprises the loop portion of a hook and loop fastener.

Claim 37 (original): The method of claim 35, wherein the at least one fastening element is an adhesive tape and the at least one target device comprises a tape receiving surface.

Claim 38 (original): The method of claim 35, wherein the at least one fastening element is comprised of a pair of laterally extending tabs disposed on the lateral edges of the first waist region, whereby the laterally extending tabs each include at least one fastening element.

Claim 39 (original): The method of claim 34, wherein the central fibrous layer comprises from about 50% to about 95% by weight super absorbent polymer (SAP).

Claim 40 (previously presented): The method of claim 34, wherein the central fibrous layer comprises fibers selected from the group consisting of cellulose acetate fibers, rayon fibers, lyocell fibers, polyacrylonitrile fibers, cotton fibers and cotton linter fibers.

Claim 41 (previously presented): The method of claim 34, wherein the central fibrous layer comprises cellulose acetate tow fibers.

Claim 42 (original): The method of claim 34, wherein the central fibrous layer further comprises up to 10% by weight fluff wood pulp fibers.

Claim 43 (original): The method of claim 34, wherein the central fibrous layer further comprises particulate additives.

Claim 44 (original): The method of claim 43, wherein the particulate additives comprise insoluble, hydrophilic polymers having particle diameters of 100  $\mu\text{m}$  or less.

Claim 45 (original): The method of claim 43, wherein the particulate additives are selected from the group consisting of potato, corn, wheat, and rice starches, and partially cooked or modified starches.

Claims 46-49 (canceled)
